TECHNICAL SKILLS

🌐 **Web/App Dev Stack:** React,

Tailwind, Firebase, Next.js

💻 **Backend & API Development:**

Python 3.x (Advanced), FastAPI, Flask,

Pydantic, RESTful API Design,

JWT/OAuth2.

🧠 **AI / Machine Learning:-**

OCR, Computer Vision (CV),

LangChain Principles, Data Processing.

🔗 **Databases & ORM:**

PostgreSQL/SQL, MongoDB,

SQLAlchemy (ORM), Firebase,

Supabase (BaaS).

💻 **Dev tools:** GitHub, Google

Workspace, Notion, Framer, Supabase

LEADERSHIP

ACHIEVEMENTS

- **UNI HACK (1st Place):** Led team and architected the Python/FastAPI backend for an AI-integrated medicine platform.
- **African Blockchain Championship (2nd Place):** Developed MedScope, a Python/AI platform for policy simulation and decentralized funding analysis.
- **Kuriftu Loyalty Program (Top 9 Finalist out of 70+):** Directed system architecture and secure API design for the loyalty program prototype.

Language

- English

YEABSERA SISAY

PROFILE

Highly driven Software Engineer specializing in Python backend development, RESTful API architecture (FastAPI/Flask), and technical team leadership. I thrive in high-pressure environments, consistently delivering real-world tech solutions that blend AI/ML, data modeling, and secure services. Proven ability to conceptualize, architect, and deliver complex, high-impact solutions, which includes multiple hackathon victories and a 2nd Place finish at the African Blockchain Championship. Seeking a Python Development Lead role to leverage strong architectural and delivery skills on high-visibility projects.

WORK EXPERIENCE

AI/ML TECHNICAL LEAD

at GDG ON CAMPUS AASTU

- Managed and guided a team of 4 Mentors responsible for curriculum delivery and technical guidance for approximately 80 student developers in the AI/ML track.

LEAD SOFTWARE PROGRAMMER

at LYNE CREATIVES

- Spearheaded the design and development of the entire company website, serving as the lead software engineer for both the Python/FastAPI backend and React frontend.
- Architected a proprietary team workspace module, enabling 15+ team members to collaboratively manage projects, dramatically improving internal operational efficiency.
- Implemented the Python/FastAPI backend with 15+ microservices for complex architectural data processing, optimizing API performance and reducing client data processing time by 35%.

AI RESEARCH INTERN

at ICOG LABS

- Contributed to the Quantum Computing track by writing the Python benchmark code for a quantum classifier focused on a breast cancer dataset, achieving a high accuracy rate on preliminary tests.
- Developed and tested algorithms using the FCA framework combined with QUBO models for optimization challenges.
- Managed and processed large, complex research datasets to ensure model training quality and reliable deployment environments.

EDUCATION

Bachelor of Science in Electromechanical Engineering

Expected Graduation: 2027

Addis Ababa Science and technology university , Addis Ababa, Ethiopia

CERTIFICATION

Artificial Intelligence Fundamentals – IBM (Nov 14, 2024)

Introduction to Quantum Information – Coursera (Jul 2025)

Building AI Solutions Using Advanced Algorithms and Open Source Frameworks – IBM SkillsBuild – Jul 2025

Hult Prize OnCampus Semifinalist – Certified Participant (Mar 28, 2025)

UNI Hack Finalist – Hackathon Winner (Feb 15 – Mar 19, 2025)

ALX Hospitality Hackathon - Finalist (Apr 12 - Apr 13)
